Docker Debugging

Demo

Strukturierte Vorgehensweise

Strukturierte Vorgehensweise

Typische Probleme

Beim Bauen eines Containers

- Dependencies fehlen
- Falsche/r User/Rechte
- Caching
- Tty, interaktive Eingaben

Strukturierte Vorgehensweise

Entrypoint

Startpunkt von Containern überschreiben.

Hilft bei Startproblemen.

```
# Interaktiv in eine Bash starten  
$ docker run -it --entrypoint /bin/bash nginx:latest  
  
root@f92787f530d3:/#
```

Entrypoint

Docker Compose YAML

Funktioniert nicht, Compose ist nicht interaktiv!

```
services:  
  redis:  
    image: redis:6.2  
    entrypoint: /bin/sh
```

Funktioniert, `sleep` lässt den Container schlafen.

```
services:  
  redis:  
    image: redis:6.2  
    entrypoint: ["sleep", "infinity"]
```

Strukturierte Vorgehensweise

Typische Probleme

Beim Betrieb eines Containers

- Container startet nicht
- Container stürzt direkt/nach einiger Zeit ab
- Datei-Rechte falsch
- Verbindungsprobleme/Netzwerk

Container auflisten

Docker nativ

```
$ docker ps
```

CONTAINER ID	IMAGE	COMMAND	CREATED	STATUS	PORTS	NAMES
5dc240cbcec7	mariadb:10.7	"run.sh"	2 weeks ago	Up 6 hours	3306/tcp	db-1
a7f8e78c14e6	redis:6.2	"start.sh"	2 weeks ago	Up 6 hours	6379/tcp	red-1

Docker Compose

```
$ docker compose ps
```

NAME	COMMAND	SERVICE	STATUS	PORTS
my-app-1	"docker-php-entrypoin..."	app	running	9000/tcp
my-db-1	"docker-entrypoint.s..."	db	running	3306/tcp

Im Container

`exec` führt Anwendungen aus (keine Scripte)

Funktioniert nicht

```
$ docker exec -ti my_container "echo a && echo b"
```

Funktioniert

```
$ docker exec -ti my_container sh -c "echo a && echo b"
```

Im Container

Docker

```
$ docker exec -it my-app sh
```

```
/app $
```

`-i`: Interaktiv

`-t`: Pseudo TTY

Docker Compose

```
$ docker compose exec my-app sh
```

```
/app $
```

Im Container

z.B. `dig` nachinstallieren unter Debian/Ubuntu

```
/app $ apt update && apt install dnsutils  
  
Get:1 http://deb.debian.org/debian ...  
...  
...  
0 upgraded, 1 newly installed, 0 to remove and 5 not upgraded.  
  
/app $
```

Im Container

```
/app $ dig db      # dig auf anderen Container

; <<>> DiG 9.16.27 <<>> db
;; global options: +cmd
;; Got answer:
;; ->>HEADER<<- opcode: QUERY, status: NOERROR, id: 14258
;; flags: qr rd ra; QUERY: 1, ANSWER: 1, AUTHORITY: 0, ADDITIONAL: 0

```

Stats

Container mit hoher Last finden

```
$ docker stats
```

NAME	CPU %	MEM USAGE / LIMIT	MEM %	NET I/O	BLOCK I/O	PIDS
nginx	0.00%	4.707MiB / 23.25GiB	0.02%	574kB / 0B	20.1MB / 32.8kB	5
app	61.68%	9.316GiB / 23.25GiB	40.07%	5MB / 33kB	56.1MB / 17.1MB	3
db	0.03%	86.13MiB / 23.25GiB	0.36%	574kB / 0B	145MB / 32.8kB	8
redis	0.19%	7.215MiB / 23.25GiB	0.03%	574kB / 0B	32.3MB / 762kB	5

Top

Prozesse und User im Container anzeigen

Docker nativ

```
$ docker top my-redis
```

UID	PID	PPID	C	STIME	TTY	TIME	CMD
1001	1547	1479	0	10:02	?	00:00:01	redis-server 0.0.0.0:6379

Top

Docker Compose

```
$ docker compose top
my-app-1
UID      PID      PPID     C      STIME    TTY      TIME          CMD
root     1547     1479     0      10:02    ?        00:00:01      php-fpm: master process (/u...
82       1910     1547     0      10:02    ?        00:00:00      php-fpm: pool www
82       1911     1547     0      10:02    ?        00:00:00      php-fpm: pool www

my-db-1
UID      PID      PPID     C      STIME    TTY      TIME          CMD
999      1581     1476     0      10:02    ?        00:00:06      mysqld _bin

my-nginx-1
UID      PID      PPID     C      STIME    TTY      TIME          CMD
1001     1496     1410     0      10:02    ?        00:00:00      nginx: master process /opt/...
```

Events

Zeigt Status Events an.

Beispiel: Container reboot

```
$ docker events db-1      # auch mit docker compose möglich

17:04:15 container kill 5dc240cbcec7 (signal=15, image=mariadb:10.7, name=db-1)

17:04:16 container die 5dc240cbcec7 (image=mariadb:10.7, name=db-1, exitCode=0)

17:04:16 container stop 5dc240cbcec7 (image=mariadb:10.7, name=db-1)

17:04:16 container start 5dc240cbcec7 (image=mariadb:10.7, name=db-1)

17:04:16 container restart 5dc240cbcec7 (name=db-1, image=mariadb:10.7)
```

Inspect

Listet alle Informationen zu einem Container auf

```
$ docker inspect my-app

[
  {
    "Id": "9feff0740fc867f006a6ba693825d44c2d418ef8b89c56842e4afca77757e5de",
    "Created": "2022-05-03T19:29:45.493331389Z",
    "Path": "docker-php-entrypoint",
    "Args": [
      "php-fpm"
    ],
    "State": {
      "Status": "running",
      ...
    },
    ...
  },
  ...
]
```

Logs

Zeigt Ausgaben von STDOUT und STDERR der PID 1 an.

```
$ docker logs nginx-1

/docker-entrypoint.sh: /docker-entrypoint.d/ is not empty, will attempt ...
/docker-entrypoint.sh: Looking for shell scripts in /docker-entrypoint.d...
